# Braspenning Group

**Braspenning Group is an international group of companies offering surface treatment as well as (rope) access and scaffolding solutions in various markets.**

We deliver our services at your site, at sea or in our workshops with our skilled craftsmen. With our in-house flexible labor pool we are able to cope with the dynamic demand in all our markets.

For all our activities we can call upon highly motivated and well-trained employees with extensive work experience.

We work for shipyards, large industrial clients and governments, however also for private individuals. We work with full attention to health and safety and quality at all times and everywhere. More and more clients come up with their sustainability requirements where we contribute as much as we can to meet their goals.

Most of our facilities are easily accessible by road and waterways.

## Since 1956

They all knew everything about de-rusting and painting of ships. That is why brothers Hein, Henk and Toon Braspenning started their business alongside the "Noordhollands Kanaal" in Amsterdam, the Netherlands in 1956.

Through hard work and entrepreneurship, the number of customers and employees grew rapidly. The company also started to serve customers in other markets.

Most work was done at customers site, however soon the facilities were too small, the company moved to a much bigger yard at the Klaprozenweg in Amsterdam in 1977.

In 1989 the second generation, Mr. Joop Braspenning, seeing the potential, bought the current facilities at tt Melissaweg in Amsterdam. New blasting- and spraying equipment was installed, making it possible to work under good environmental conditions all year around.

The number of ship repair yards throughout the Netherlands has grown ever since as well as the size of the workshops. Many cranes, bridges, storage tanks and other industrial components have been surface treated in our workshops.

The current third generation, Heino Braspenning added the rope access and scaffolding activities to the portfolio and expanded the activities outside the Netherlands. Nowadays the company has established a position in many countries in Europe as well as the Caribbean.

## Health and Safety above everything and we care about our Environment.

We believe that people make the difference in our company. We want all people involved in our projects to go home minimum as healthy as they arrive in the morning, every day! We are VCA, two star, as well as ISO 14001 certified.

## Quality, passion for what we do.

We need to deliver quality. That is why our customers are happy and why they do business with us for the long term. We are ISO 9001 certified. Our people are skilled, fit for the job and have a mentality to work. We know that the passion for our work has a pay off.

## Customer orientated

Our client is always number one, however we also take into account the interest of our people, the environment and our own business. We have a flat and flexible organization, that means that we can cope with the dynamic demands of our clients.

We have a focus on delivery time as we know that downtime is of the essence for most of our clients. We urge ourselves to respond quick to our customer requests and their specific requirements.

## Invest in new technology

We constantly reach out to companies that bring new technologies to the market. This can be start-ups that we support or well established enterprises where we buy their products. In this way we keep ahead of our competition, where as an example we can improve adhesion of paint, reduce overspray, reduce use of paint or faster applications.

# Services

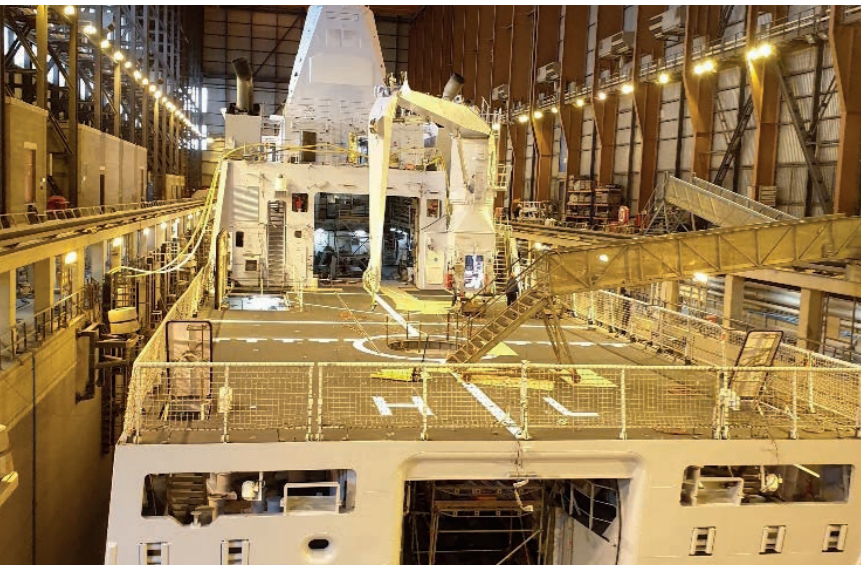

## Ship maintenance and repair

The core of our business is in ship repair. We apply our services whilst vessels are in dock or at the key side of a shipyard. Tank blasting and coating can also be done at sea with mobile teams. Smaller craft can be transported to our workshops.

## Offshore

At shipyards we have applied our services for offshore units such as jack-ups, drilling rigs and semi-submersibles. Although we can do Rope Access onshore, the majority of work is done offshore both in oil&gas as well as in wind(parks).

## Naval

We have large experience with working for Dutch and other Navies. We can meet their highest requirements and are well aware of the organization and working methods. We continuous work at the Dutch Navy base in Den Helder.

## Transport, Industry and Infrastructure

We have a large variety of clients in transport, general industry and infrastructure. We can serve them at their sites or in our workshops. Thanks to our advanced (mobile) blasting and paint spraying units, our versatile specialists can handle any job.

## Special applications

### Applications

- Ice breaker paint
- Silicone
- Glassflake
- Float coat
- Ceramic coatings
- Marine line

### Workshop Techniques

- Blasting towers / grit recycling
- Metalizing/Thermal spraying
- Glass pearl blasting
- Ceramic blasting
- Fire resistant coating

### Equipment

- Conventional blasting (average capacity 24 nozzle's)
- Powertool cleaning
- Dust free hydroblasting equipment, up to 3000 bar, capacity 1250 m2 per shift/ per machine
- Hydrojetting guns, up to 2500 bar
- Special blasting hoses to reach the smallest areas
- Vacuum blasting equipment up to SA 2,5

**Dutch Railways and Braspenning Indoor longstanding partners**

In our halls the bogie frames of the trains are maintained. From cleaning to blasting and painting. Every bogie frame will be overhauled after a million kilometers. On the site of Dutch Railways we blast and paint the coaches, both inside as well as outside.
